2016

PROJECTS

Email Spam Detection | *AI ML,Python,Streamlit*

[link](#)

- Developed a machine learning model for email spam detection to alleviate the problem of spam emails inundating user inboxes. Using with various classification models including Naive Bayes, Support Vector Machines (SVM), and Random Forest,

Bank Management System | *Java,SQL*

[link](#)

- A Bank Management System is a software application that facilitates the efficient and organized management of banking operations. It involves creating a digital platform that helps banks and financial institutions handle various tasks, such as customer account management, transaction processing, record-keeping, reporting, and more.

ACHIEVEMENT

SEMINARS / TRAININGS / WORKSHOPS

- Machine learning using Python, Institute: Tech Access
- Python Programming and Applications, Institute: SNT Education

CERTIFICATION/ RESEARCH PAPER

- Research paper Published Certification- Email Spam Detection in the Age of Cyber Threats: A Comprehensive Approach Integrating Cleaning, Analysis, and Modeling.

TECHNICAL SKILLS

Language : C++,C,Python,Java

Frontend : HTML,Javascript,CSS,React,Tailwind

Backend: SQL,Mangodb
